No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

| Sequence 2538, Application US/09864761
| Patent No. US200200487531
| GENERAL INFORMATION:
| APPLICANT: Penn, Sharron G.
| APPLICANT: Penn, Sharron G.
| APPLICANT: Hansel, David R.
| TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID FROBES USEFUL STILE NUMBER: 105/09/864,761
| CURRENT PELLANG DATE: 2001-05-20
| PRIOR PRILANG DATE: 2000-05-20
| PRIOR APPLICATION NUMBER: US 60/207,456
| PRIOR PRILANG DATE: 2000-06-30
| PRIOR PELLOATION NUMBER: US 60/232,366
| PRIOR PLILANG DATE: 2000-09-04
| PRIOR FILING DATE: 2000-09-04
| PRIOR FILING DATE: 2000-09-04
| PRIOR FILING DATE: 2001-09-04

Patent No. US20020169302A1

GENERAL INFORMATION:
APPLICANT: Havukkala, 11kka J.
APPLICANT: Glenn, Matthew
APPLICANT: Glenn, Matthew
APPLICANT: Grigor, Murray R.
APPLICANT: Molenar, Adrian J.
TITLE OF INVENTION: Compositions isolated from bovine
TITLE OF INVENTION: mammary gland and methods for their use.
FILE REFERENCE: 11000.1044c3
CURRENT APPLICATION NUMBER: US/10/079,623
CURRENT FILING DATE: 2002-02-19
NUMBER OF SEQ ID NOS: 3700
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

Patent No. US20020142421al
GENERAL INFORMATION:
APPLICANT: SH40, Wei et al.
TITLE OF INVENTION: ISOLATED HUMAN AMINOACYLASE, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN AMINOACYLASE, AND USES THEREOF
FILE REFERENCE: CL001179DIV
CURRENT APPLICATION NUMBER: US/10/109,860
CURRENT FILING DATE: 2002-04-01
PRIOR PILING DATE: 2001-03-23
NUMBER OF SEQ ID NOS: 14
SEGNETARE: FastSEQ for Windows Version 4.0

GENERAL INFORMATION
GENERAL INFORMATION
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NOTLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001157
CURRENT PAPLICATION NUMBER: US/09/799,799
CURRENT FILING DATE: 2001-03-07
NUMBER OF SEQ ID NOS: 5
SSCTUARR: FastSEQ for Windows Version 4.0
LENGTH: 88191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 71.7%; Score 29.4; DB 10; Length 88191; Best Local Similarity 80.5%; Pred.
